Sachi Financial closes the distance between global financial markets and everyday investors. Members do not place trades, watch charts, or time entries. The platform executes on their behalf, sizes every position to their capital, and writes every outcome — **profit or loss** — straight into their account.

## What makes us different

- **One trade, every account.** The same position reaches every active member at the same moment, sized proportionally — no member gets a better fill than another.
- **You decide when profit moves.** Nothing is auto-swept. Profit sits in your trading account until you realise it.
- **Every transaction is permanently recorded.** Balances are never quietly edited — every movement stays on record, so any balance can always be explained.
- **Income that does not depend on winning.** IB commission is a per-lot rebate paid on volume — profit or loss.

**Decisions taken once, applied to everyone**

The trading desk creates a master position — the engine does the rest

> *Rules first, returns second. Every rate, gate and lock in this deck exists in configuration — which means it can be shown, audited and explained.*

## Our Mission

To give ordinary investors access to **systematic, institutional-style execution** without asking them to become traders. Same trade, same second, same terms — with the arithmetic visible at every step.

- Transparent profit realisation — the split is published, not hidden
- Every transaction permanently recorded, start to finish
- Terms frozen at deposit — offers cannot change under a member

## Our Vision

To be the managed-trading platform members recommend because the **rules held up** — not because a screenshot went viral. Automation that runs without favour, payouts that prove themselves, growth earned through the network.

- A member-first system across every market we reach
- USDT payouts that always come with verifiable proof
- Community-powered, referral-led organic growth

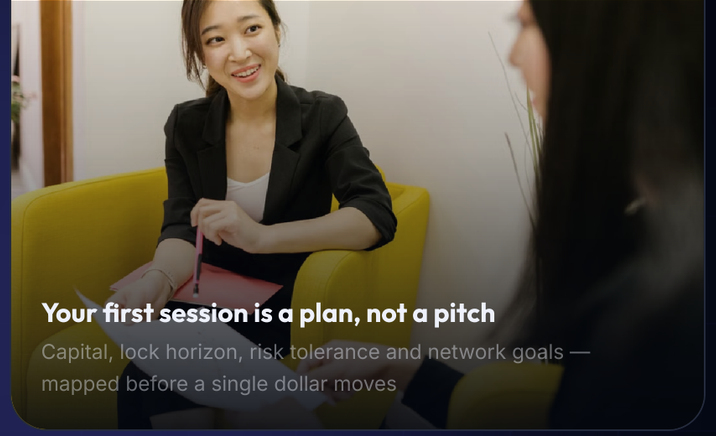

### Transparency

Rates, splits and gates published — and enforced in code

### Automation

No manual intervention between decision and execution

### Your first session is a plan, not a pitch

Capital, lock horizon, risk tolerance and network goals — mapped before a single dollar moves

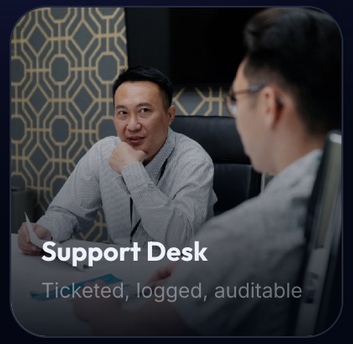

### Portfolio Review

Quarterly walkthrough of realised vs unrealised

### Onboarding Desk

KYC, wallet setup and PIN, done with you

### Support Desk

Ticketed, logged, auditable

### IB Growth Clinic

Reach the next qualification band

## Onboarding Consultation

A guided first hour: account structure, deposit sizing and what the lock period actually commits you to

## Portfolio Review

Read your own numbers with someone: realised, unrealised, IB earned, and what the next realisation would split into

is real.

EUR/USD | GBP/USD | USD/JPY | USD/CHF | AUD/USD | USD/CAD | XAU/USD

| HOURS | LIQUIDITY | SPREAD |
|---|---|---|
| 24 / 5 | Ultra-High | Tight |

downside is bounded first.

BTC/USDT | ETH/USDT | BNB/USDT | SOL/USDT | XRP/USDT

| HOURS | VOLATILITY | RISK |
|---|---|---|
| 24 / 7 | High | SL / TP Set |

## Global session coverage

Engine online

Sydney

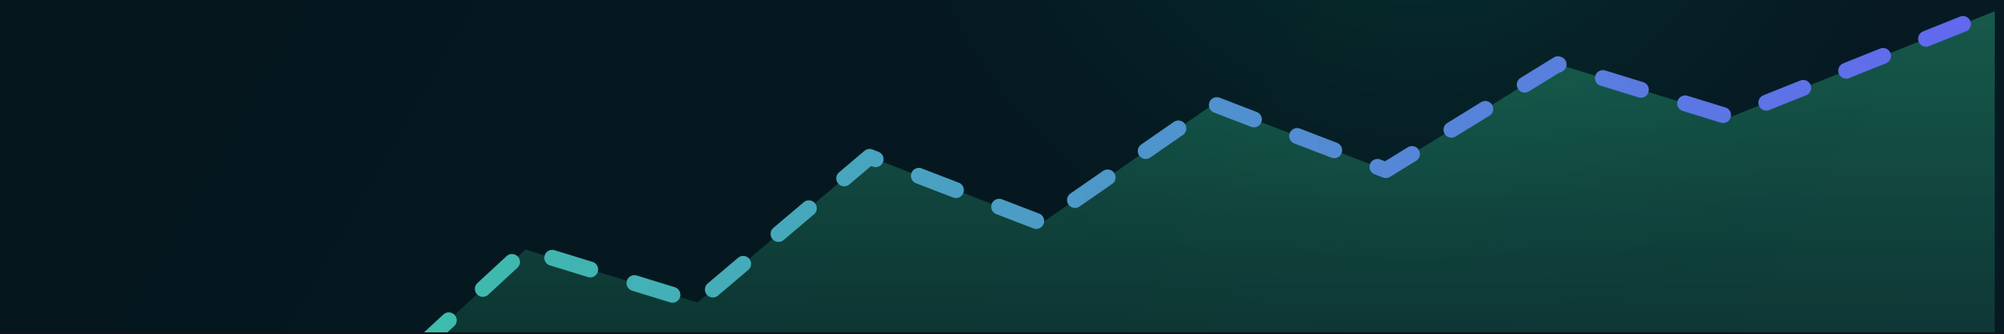

Tokyo

London

New York

As one session hands over to the next, liquidity moves with it — and so does the desk's attention. Crypto covers the hours the FX week leaves closed.

ILLUSTRATIVE PRICE ACTION

Step 01

### Register

Join through your sponsor's referral link. Your IB code *is* your referral code.

Step 02

### Verify Email

A signed link lands in your inbox. Until it is clicked: no dashboard, no deposit, no withdrawal.

Step 03

### Complete KYC

ID front & back plus a profile photo. Approval is required **before** money moves either way.

Step 04

### Set PIN & Wallet

Generate your 8-digit transaction PIN and save the USDT address payouts will go to.

Step 05

### Deposit USDT

Minimum **$200**. Submitted for admin approval, then credited to your trading account.

Step 06

### Trade & Earn

The bonus multiplier applies, the account goes active, and broadcast trades start reaching it.

### What you need before you deposit

- ✓ A sponsor's referral / IB code
- ✓ A verified email address
- ✓ Approved KYC documents
- ✓ A BEP-20 USDT wallet
- ✓ Your 8-digit transaction PIN
- ✓ Minimum $200 to open a trading account

**Terms are frozen when you request the deposit.** The bonus multiplier and lock period bound to your account are the ones that were live at that moment — a later change to platform offers cannot rewrite them.

## How the 4× bonus works

Your deposit plus the bonus multiplier is the capital every trade is sized against. **(1x Real + 4x Bonus = 5x Total Capital for multiplied trades)**

You deposit **$200**; the system adds **$800** of bonus. Every broadcast trade is then sized against the full **$1,000** — five times the market exposure your own capital would have carried alone. Profit and loss are both calculated on that combined base.

### Bonus at every deposit size

| YOUR DEPOSIT | BONUS ADDED | TRADING POWER | EXPOSURE |
|---|---|---|---|
| $200 | $800 | $1,000 | 5× |
| $500 | $2,000 | $2,500 | 5× |
| $1,000 | $4,000 | $5,000 | 5× |
| $5,000 | $20,000 | $25,000 | 5× |
| $10,000 | $40,000 | $50,000 | 5× |

Shown at a 4× multiplier. The rate live when you request the deposit is the one bound to that account.

### Read this part carefully

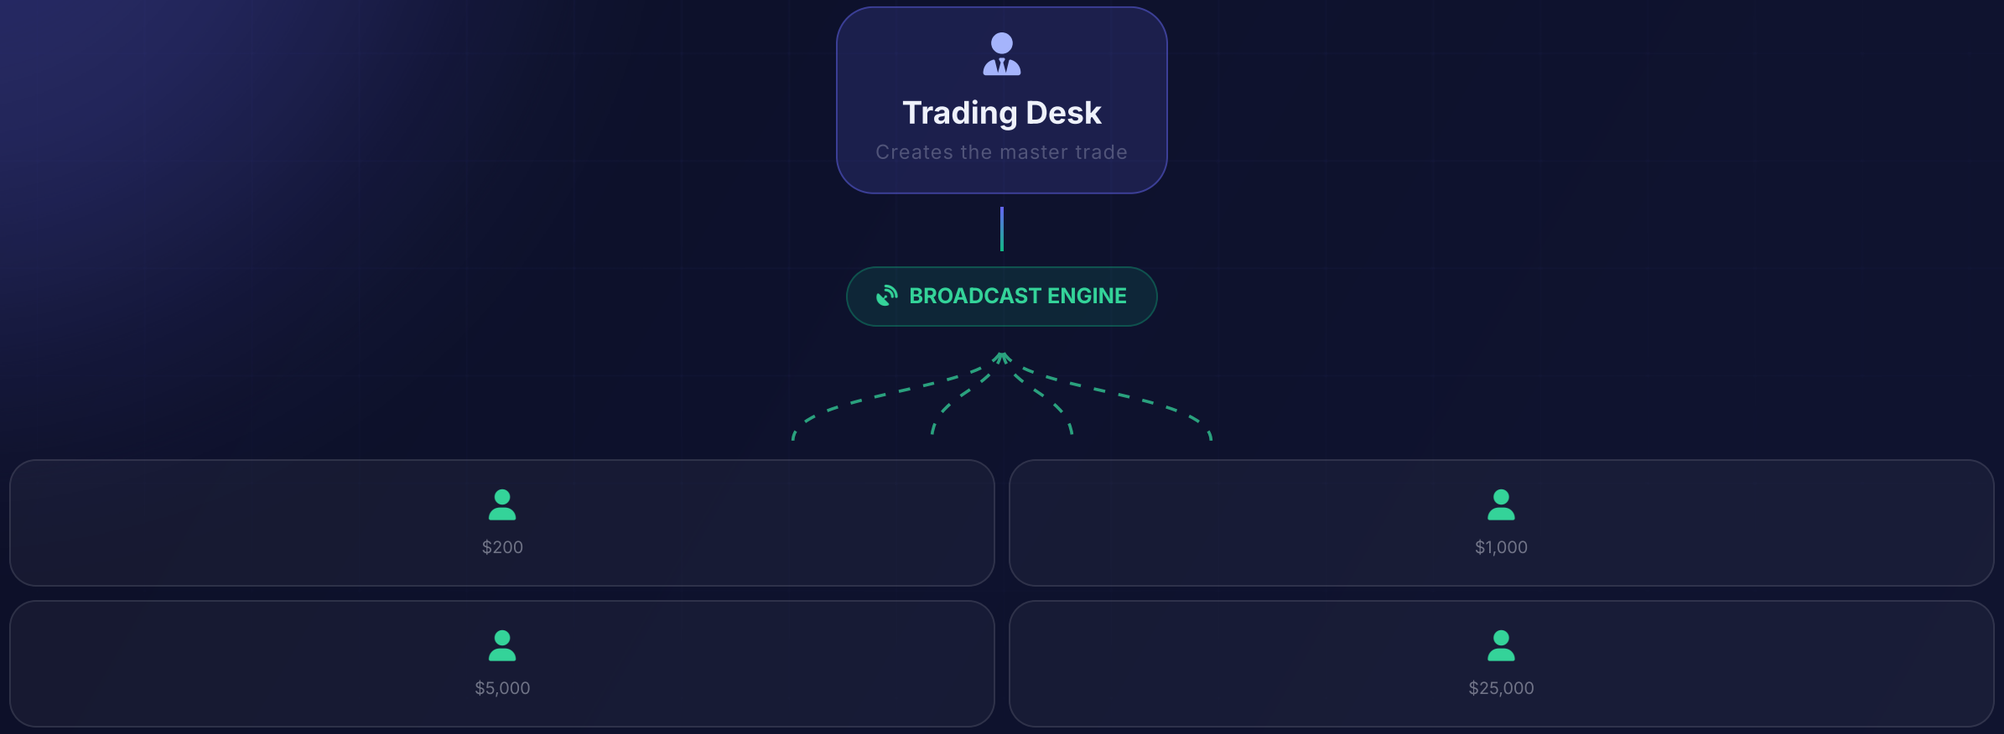

- **Bonus is trading power, not cash.** It sizes your lot. It is never withdrawable and never becomes capital.
- **Loss is real.** Because trades run on the combined base, a losing run moves your capital faster than $200 alone would.

### 3 · Simultaneous execution

Every active account takes the position together, at the same price. No queue, no ordering advantage, nobody left out because they were asleep.

### 4 · Your result is recorded instantly

On close, profit or loss is recorded in your trading account right away. Profit stays **undistributed** until you realise it — IB commission, by contrast, is credited straight away.

Same symbol · same direction · same price · same second — only the **lot size** differs, and it differs by capital alone.

PROPORTIONAL SIZING, IN PLAIN TERMS

Your lot size scales with your total trading capital — deposit plus bonus — relative to the reference position size. Bigger capital, bigger position; smaller capital, a smaller one — always in

PROFIT SYSTEM

# P&L and the 60 · 10 · 30 Realisation

### What P&L means here

When a broadcast trade closes, the result posts to your trading account immediately. Profit accumulates as **undistributed profit** — it is yours, but nobody has been paid yet: not you, not your upline, not the platform.

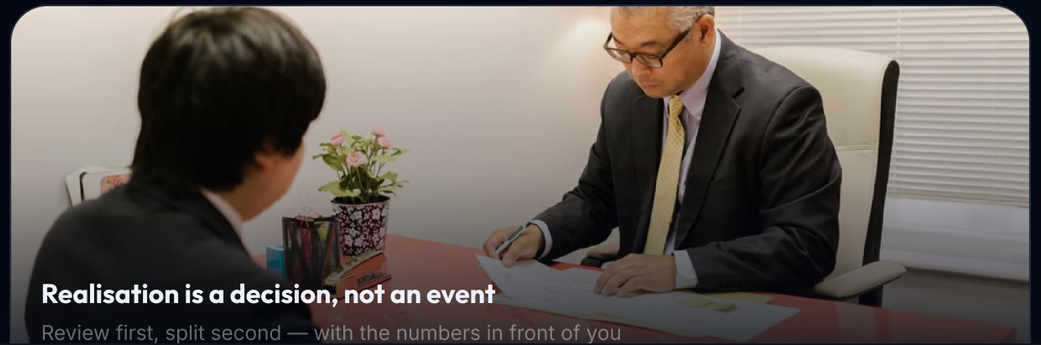

### You press the button

Profit never auto-transfers. You click **Realise Profit**, and at that moment the 60·10·30 split runs on the amount you chose. Realise a slice, realise all of it, or leave it compounding inside the trading account — your call.

Realising costs nothing. The 5% fee applies only when money actually leaves the platform as USDT.

### When trades lose

Losses take unrealised profit first and capital only after that. While you are down overall there is nothing to realise — the button has no profit to split.

**Realisation is a decision, not an event**

Review first, split second — with the numbers in front of you

## The 60 / 10 / 30 split

Applied to whatever amount you choose to realise

**YOUR SHARE** 60%

Added to your Trade Profit total and to Main Wallet — the spendable copy

**UPLINE GENERATION** 10%

1% to each of 10 upline levels — subject to their qualification gates

**PLATFORM** 30%

Funds execution, infrastructure, payouts and support

WORKED EXAMPLE

Realise **$1,000** of profit → you take **$600** · uplines share **$100** · platform keeps **$300**.

Send that $600 out as USDT and the 5% payout fee applies at that point — $30 — leaving $570.

**Why uplines care:** generation income only exists once a downline actually realises. Profit sitting untouched in someone's account has been distributed to nobody.

Four places — and only one of them holds spendable money. This single distinction removes most of the confusion members ever have about their balance.

### Main Wallet
THE MONEY

The only wallet anything can be spent from. Realised profit, IB commission and generation income are all written here, and every USDT payout leaves from this balance — only this one.

### Trading Account
7-DIGIT · CAPITAL-LOCKED

Holds your deposit, your bonus and your undistributed trade profit. Locked capital cannot move anywhere until the lock period ends or a release is approved.

### IB · Generation · Trade Profit
LIFETIME LABELS

Three running totals answering "how much have I earned from this?" — IB commission, team generation income, and your own realised share. They are counters, not pots.

### Do not add them up
THE COMMON MISREADING

Every credit is written **twice** — once to its label, once to Main Wallet. Adding the three labels to your Main Wallet balance double-counts every dollar you earned.

### ⇄ Transfer rules

| FROM | WHERE IT MAY GO |
|---|---|
| IB Wallet | Any member's IB Wallet · any trading account |
| Generation Wallet | Any member's Generation Wallet · any trading account |
| Trade Profit | Any member's Trade Profit · any trading account |
| Trading A/c | **Blocked while locked.** After the lock: withdraw, or move to a trading account |

- ✓ Like-to-like, or into a trading account. IB can never feed Generation.
- ✓ Members are addressed by **IB code** — you may send to anyone on the platform, not just your own team.
- ✓ Internal transfers are **free**. Only a USDT payout carries the 5% fee.

LVL 9
**$1**
per lot

LVL 10
**$1**
per lot

- **Paid at trade close** — not held back until anyone realises
- **Lands in Main Wallet** — spendable the moment it is credited
- **Profit or loss** — a volume rebate, not a share of winnings
- **No cap** — bigger network volume, bigger rebate

## Worked example — one month

| LEVEL | LOTS TRADED | RATE | YOU EARN |
|---|---|---|---|
| Level 1 · direct members | 120 | $2.00 | $240 |
| Level 2 | 260 | $3.00 | $780 |
| Level 3 | 310 | $2.00 | $620 |
| Levels 4 – 6 | 700 | mixed | $1,800 |
| Levels 7 – 10 | 900 | mixed | $2,700 |
| **Total** | **2,290** | — | **$6,140** |

### The gate that overrides everything: $200

You must have deposited at least **$200 into one single active trading account** — measured on what was deposited, never summed across accounts. Below it, income stops at every level, no matter what your team has done.

**Lost it trading?** Income continues — losing does not close anyone's levels.

**Took the capital out?** The gate shuts that day — deposits are what count.

## 1 Level 1

DIRECTS · UNCONDITIONAL

No countdown. No team requirement. With $200 on your own ID, Level 1 stays open **for life**.

∞ Lifetime from day one

## 2 Levels 2 – 5

DAYS FIRST, THEN LIFETIME

Every **$1,000** of direct business grants **30 days** of L2–L5 earning, and unused days accumulate — 20 days left plus $1,000 of new business makes 50.

$1,000 → 30 days

$5,000 → 150 days

$9,000 → 270 days · ceiling

LIFETIME UNLOCK

$10,000 direct business **and** 2 directs holding $1,000+ each. The countdown then stops for good.

## 6 Levels 6 – 10

LIFETIME ONLY

The deep band has no temporary window. Two conditions, both required together:

- **4 directs**, each holding **$1,000+** of real deposit
- **$50,000** of real business across Level 1 + Level 2 combined

∞ Permanent once met

## The whole ladder on one line each

| BAND | DIRECTS | EACH HOLDS | BUSINESS | DURATION |
|---|---|---|---|---|
| L1 | — | — | — | Lifetime, unconditional |
| L2 – L5 · temporary | — | — | $1,000 → 30 days | 30 – 270 days |
| L2 – L5 · lifetime | 2 | $1,000 | $10,000 (L1) | Lifetime |
| L6 – L10 | 4 | $1,000 | $50,000 (L1+L2) | Lifetime |

"Business" means real deposits only — bonus never counts toward any threshold.

### What you can withdraw at any time

- ✓ Realised profit — your 60% share
- ✓ Generation income
- ✓ IB commission
- ✓ Any Main Wallet balance

A 5% fee applies when that money leaves the platform as USDT. Moving it around inside the platform is free.

### Your capital is fully protected

The moment your lock period ends, your **full original capital** returns to your Main Wallet automatically — no strings attached. You keep complete control of your funds, always.

- ✓ Nothing about your capital is ever at the platform's discretion once the lock ends
- ✓ Have a specific situation? Our **support desk** is always available to help

## Reclock & Reinvest

Keep the money working instead of parking it

**1 · The lock ends**
Trading on that account stops and the capital is free

**2 · You choose**
Withdraw it, or reinvest it into the same account

**3 · Reclock restarts everything**
A new lock period begins and the bonus multiplier applies again

Reclock **$1,000** of unlocked capital and it becomes **$5,000** of trading power again — with no new deposit.

SECURITY & TRUST

# Built So the Numbers Can Be Checked

Three layers of control: how money is recorded, how an account proves it is you, and how a payout proves it actually happened.

## Protecting your money

EVERY RUPEE ACCOUNTED FOR

- **Every transaction is permanently recorded.** Entries are added, never edited after the fact.
- A balance **never changes on its own** — it only moves because a recorded transaction says so.
- Every money movement completes as **one whole step**: both sides land together, or neither does.
- Built-in safeguards mean **the same payment can never be processed twice**, even on a retry.
- Every amount is calculated to the **exact cent** — no rounding drift, ever.

## The account layer

IDENTITY & ACCESS

- **Email verification** before the dashboard opens — a signed link that expires.
- **KYC approved first.** No deposit and no withdrawal until documents pass review.
- An **8-digit transaction PIN** on every transfer and withdrawal.
- Creating or viewing that PIN needs **two proofs**: your login password plus a code from your authenticator or email.
- A withdrawal request needs the PIN **and** a second-factor code of its own.
- Email address changes only through a **logged support ticket** — never self-service.

## The payout layer

PROOF OF SETTLEMENT

- **Two-step approval:** the member requests, an admin approves, and only then is payment sent.
- Separate approval queues for **unlocked capital, locked capital, trade profit and IB/generation** — each reviewed on its own terms.
- A payout must be **independently verifiable**; the transaction reference is recorded against the request.
- Funds go to your **saved wallet address** only.
- A suspended account is **frozen, not drained**: nothing moves and nothing accrues — including the capital lock clock.

FULLY AUDITABLE

TIMESTAMPED

NO DUPLICATE CHARGES
